## U.S. Patent Application Serial No. 09/854,474

Replace the paragraph beginning at page 29, line 4, with the following rewritten paragraph:

113

Thus, the present invention provides a bonding method insuring a remarkably improved adhesion of an addition type curable hydrocarbon polymer composition to various substrates.

## IN THE CLAIMS:

Please AMEND the claims as follows:

13. (Twice Amended) A bonding method for bonding a cured product to a substrate which comprises coating a primer composition comprising a silane coupling agent on a substrate,

applying a curable composition comprising a hydrocarbon polymer having at least one alkenyl group per molecule onto the primed substrate, and

curing the curable composition to obtain the cured product bonded to the substrate.

14. (Amended) The bonding method according to claim 13
wherein the silane coupling agent has at least one functional group selected from the group
consisting of epoxy, vinyl and (meth)acryloyl groups.

(25

18. (Twice Amended) The bonding method according to Claim 13 or 14 wherein said primer composition comprises a polyvalent alkoxysilane and/or a condensation product thereof.

## U.S. Patent Application Serial No. 09/854,474

19. (Twice Amended) The bonding method according to Claim 13 or 14 wherein said primer composition comprises an organoaluminum compound and/or an organotitanium compound.

\ \( \)

- 20. (Twice Amended) The bonding method according to Claim 13 or 14 wherein said primer composition comprises a hydrosilylation catalyst.
- 21. (Twice Amended) The bonding method according to Claim 13 or 14 wherein said primer composition comprises an organic solvent.
